Subject: draft summary of the June 11 South Coast breakout

Flag: Follow up

Hi Laura and Ariel -

Thanks again for organizing the June 11 event. Great job!

We were asked to share a summary of our breakouts. Please see below a summary of the South Coast breakout session, which I co-led with Scott King. The attendees have concurred on the context.

Summary

Because of time constraints, the group only discussed South Coast SIP submittals currently being worked on.

- For ozone, EPA's notice of proposed rulemaking on the ozone portions of the 2016 AQMP was signed on May 22. Publication is pending. EPA is hoping to finalize in August-September time frame, but schedule is contingent on substance of any comments received.
- For PM_{2.5}, EPA is hoping to propose on the 2012 PM_{2.5} moderate area plan and reclassification request this summer. EPA is currently waiting on some clarifying information that is being prepared by South Coast AQMD and is needed for the proposal. EPA is hoping to take final action on the moderate area plan in the fall/winter and will act on the 2012 PM_{2.5} serious area plan shortly thereafter.
- CARB and South Coast AQMD are working on a submittal due on January 1, 2020, to "true-up" the 182(e)(5) commitment for the 1997 ozone NAAQS. EPA offered to participate in the process.
